

Sepago disposable curtains

Sepago curtains are treated with third-generation antimicrobial protection. They are lightweight, pre-pleated and easy to fit. The disposables can be replaced without touching the floor, and an infected room can be used again in less than 5 minutes. After replacing a curtain, you can use the dated label as an audit trail for your compliance systems. All curtains are wrapped in a protective plastic sleeve, which is not removed until the curtain is hung, to keep it clean. A box of disposables is easily carried by one person and takes up little space. All curtains have integrated special (EF) hooks that fit almost all separation tracks. If they don't fit, you can order universal fittings (UF) (just the eye, no hook).
