Exergen TAT-2000 Temporal Scanner thermometer

The TemporalScanner Thermometer is a totally non-invasive system with advanced infrared technology providing maximum ease of use with quick, consistently accurate measurements. Advanced, patented technology measures temperatures with a gentle stroke across the forehead, making it safe and comfortable for the patient.
It captures naturally emitted heat from the skin above the temporal artery, 1,000 times a second and then gives a reading of the most accurate temperature. This light-duty professional model is intended for school nurses, nursing homes, and other occasional use clinical settings.

Features

Fast, easy and accurate
Accurate temperature with a gentle forehead scan
